South Africa loses billions of rands every year to vehicle theft, fuel fraud, and security breaches — and for businesses managing fleets or fixed sites, this is a daily operational reality, not a theoretical risk. Since 2007, DigitFMS has been the answer. We are South Africa's leading electronic security partner for fixed and mobile assets — delivering GPS tracking, AI-powered CCTV, access control, alarm systems, fuel monitoring, and 24/7 off-site monitoring to businesses that cannot afford to be exposed.

With over 100 branches nationwide and clients including Amazon, WBHO, VKB, Java Logistics, and Senwes, DigitFMS combines locally-engineered technology, PSiRA-compliant operations, and a national service network to deliver security that works in South Africa's conditions — including offline capability during load shedding. We don't just install systems. We close vulnerabilities.

MONITORING & SUPPORT

VISION & MISSION**OUR VISION****TO REDEFINE ELECTRONIC SECURITY IN SOUTHERN AFRICA**

To be the undisputed leader in electronic security for fixed and mobile assets across Africa — setting the standard for technology, service, and protection that businesses depend on without compromise.

OUR MISSION**TO PROTECT EVERY ASSET. CLOSE EVERY GAP.**

To deliver integrated electronic security solutions that eliminate the vulnerabilities South African businesses face every day — protecting vehicles, fuel, sites, and people with technology built for local conditions.

Oms is reg agter jou. We're right behind you

Whether you're protecting a single vehicle or a fleet of 500 across multiple provinces, DigitFMS has a purpose-engineered electronic security solution. Every product is designed for South Africa's real-world conditions — offline-capable, locally supported, and backed by 20 years of operational expertise.

MOBILE ASSET SECURITY

Protecting Vehicles, Fuel Assets & Mobile Operations

VEHICLE TRACKING & FLEET MANAGEMENT

Live GPS tracking, route optimisation, driver behaviour monitoring, and tamper detection — all escalated to a 24/7 control room. The Digit PS platform actively prevents vehicle loss. Trusted by Java Logistics, VKB, and major fleets across South Africa.

TRUCK FUEL MONITORING

Stop fuel theft at source. The Digit D-Fuel system delivers litre-level accuracy with instant theft alerts and tamper detection. Java Logistics achieved a 22% reduction in fuel losses within 60 days of deployment.

BULK FUEL BOWSER MANAGEMENT

Full visibility from delivery to dispensing across bulk tanks and mobile bowzers. The Digit D-Bulk system eliminates fuel fraud with real-time monitoring, level alerts, as well as automated reporting. Up to 18% bulk fuel loss reduction reported by clients.

MOBILE VIDEO WITH ADAS

AI-powered cameras detecting driver fatigue, distraction, as well as unsafe behaviour before incidents happen. Live HD streaming, collision warnings, lane departure alerts, and secure cloud footage — full driver accountability on every trip.

STOLEN VEHICLE RECOVERY

Active recovery network, 24/7 control room escalation, and direct law enforcement liaison give your vehicle the best chance of recovery — minimising downtime as well as insurance exposure when prevention has been defeated.

FIXED ASSET SECURITY

Protecting Facilities, Infrastructure & People

**AI-POWERED CCTV & ACCESS CONTROL**

Facial recognition, licence plate capture (ANPR), crowd analytics, access control, and 24/7 virtual guarding. Amazon reduced after-hours incidents by over 60% across their 50,000m² warehouses following DigitFMS deployment.

**AJAX WIRELESS ALARM SYSTEMS**

100% wireless covering up to 11km² – no cabling, rapid installation, mobile app control, scalable to 200 devices. Load-shedding resistant. WBHO achieved immediate incident reduction across 20,000m²+ construction sites.

**OFF-SITE MONITORING**

24/7 professional surveillance at a fraction of guard costs. Trained operators monitor your feeds in real time – verifying threats, dispatching response, as well as logging incidents. Continuous vigilance that never sleeps and never misses an alert.

**NIGHT VISION & RECORDING**

Crystal-clear surveillance in complete darkness using advanced infrared and low-light sensors. 24/7 HD recording for vehicles, yards, and high-risk sites – evidence-grade footage that stands up in investigations and insurance claims.

ADVANCED PROTECTION SOLUTIONS

Reducing Risk Through Intelligent Technologies

**CHILLI PEPPER & FOG DEPLOYMENT**

An instant non-lethal deterrence deploying automatically when triggered – a 2-million Scoville pepper spray combined with zero-visibility fog. Protection of cash-in-transit vehicles, fuel stores, warehouses, as well as transformer yards without endangering staff.

**AUTONOMOUS SECURITY ROBOTICS**

AI-powered patrol robots for warehouses, logistics yards, and industrial plants – 24/7 autonomous surveillance without human limitations. Advanced sensors, real-time threat alerts, HD evidence capture, and full integration with your existing security infrastructure.

**DETECT & PREVENT WATER LEAKS**

Water damage accounts for 40% of South African insurance claims. Our Ajax-powered wireless leak sensors detect flooding instantly and automatically shut off water supply within 7 seconds – protecting properties, reducing insurance risk, and preventing costly operational disruption.

Every system we design, every franchise we support, and every client we serve is guided by six principles that define what DigitFMS stands for — and why businesses across South Africa trust us with what matters most.

**INNOVATE & ELEVATE**

South Africa's threat landscape evolves daily. We invest relentlessly in next-generation technology — AI analytics, autonomous robotics, intelligent monitoring — so our clients stay protected against threats that don't exist yet.

**INTEGRITY & TRANSPARENCY**

In security, trust is everything. We operate with complete transparency — with honest assessments, clear pricing, PSiRA-compliant operations. Every client relationship is built on accountability, not promises.

**PROTECT & SERVE**

We exist to protect what our clients have worked to build — their vehicles, their sites, their people, and their profitability. This is not a service line. It is our reason for existing.

**CUSTOMER CENTRICITY**

No two businesses face identical risks. Every DigitFMS solution is engineered around the specific vulnerabilities, budget, and operational environment of each client — never a template, always a custom fit.

**PROACTIVE & RESPONSIVE**

We don't wait for incidents and then react. Our 24/7 control room, AI-driven alert systems, and national branch network detect, respond, and resolve — before losses mount and before clients even know an incident has begun.

**COLLABORATIVE EXCELLENCE**

We exist to protect what our clients have worked to build — their vehicles, their sites, their people, and their profitability. This is not a service line. It is our reason for existing.

South Africa has hundreds of security providers. Most install equipment and disappear. DigitFMS does something fundamentally different — we engineer bespoke electronic security ecosystems for your specific risk profile, support them with a national branch network, and stand behind every system with 24/7 monitoring and ongoing partnership. Here is exactly why businesses choose us — in their own words and numbers.

01 **LOCALLY-ENGINEERED TECHNOLOGY**

Our hardware and software is designed for South Africa — offline-capable during load shedding, it's optimised for local network conditions, and built for African roads, warehouses, as well as industrial environments. There is no foreign platform adaptations. Technology that understands the specific threat environment you operate in every day.

02 **PROVEN CLIENT RESULTS**

Java Logistics: 22% fuel loss reduction in 60 days. Amazon: 60% fewer after-hours incidents. VKB: 40% drop in unauthorised kilometres within 3 months. Werner Bulk Fuel: 18% fuel loss reduction across 4 sites. Results, not promises — verified outcomes from real South African operations.

03 **100+ BRANCHES. TRUE NATIONAL REACH.**

From Johannesburg to Cape Town, Durban to the Northern Cape — DigitFMS has a local branch with local technicians and local knowledge near every client. Fast installation, rapid response, and ongoing aftercare that actually arrives. Not a call centre. Real people, nearby.

04 **PSIRA COMPLIANT. FULLY ACCREDITED.**

Every DigitFMS operation meets PSiRA requirements and SAIDSA installation standards. All CCTV and biometric systems are POPIA-compliant. When you choose DigitFMS, you choose a partner that protects your legal exposure as well as your physical assets.

05 **ASSESSMENT TO AFTERCARE. END-TO-END.**

Free security assessment. Custom solution design. Professional installation by certified technicians. Full staff training. Most deployments are live within five business days. We don't sell and disappear — every system comes with a long-term partnership that evolves as your risk profile changes.

06 **FLEXIBLE FINANCE. NO UPFRONT BARRIER.**

Enterprise-grade electronic security should not be limited to large businesses. DigitFMS Finance provides tailored monthly instalment plans for businesses of all sizes — no large capital outlay, no compromise on the level of protection you receive.

DigitFMS engineers integrated electronic security platforms combining GPS tracking, AI analytics, RFID technology, and 24/7 monitoring into a single operational view. Every system is built for performance today and scalability tomorrow — and critically, built for South Africa's conditions, including offline operation during load shedding.

PLATFORM TECHNOLOGY

GPS TRACKING PLATFORM (DIGIT PS)

Live GPS tracking with tamper alerts, signal jamming detection, battery disconnect monitoring, as well as 24/7 control room escalation. Passive tracking records where a vehicle went. Digit PS prevents it from being taken in the first place.

AI-POWERED SURVEILLANCE

CCTV cameras with facial recognition, licence plate capture (ANPR), crowd analytics, and real-time threat alerts. Intelligent enough to differentiate between authorised staff and an intruder — and act automatically, at any hour.

RFID ASSET MANAGEMENT

Precision tracking for tools, equipment, as well as high-value inventory using RFID technology. Real-time location data, movement alerts, and automated reconciliation — which eliminates shrinkage and provides complete asset accountability.

MOBILE APP & WEB PLATFORM

Full fleet & security management from any device — live maps, fuel reports, driver scores, incident alerts, and CCTV feeds in one unified dashboard. Works during load shedding. Accessible to your entire management team simultaneously.

REMOTE VEHICLE DISARM

Respond instantly to vehicle theft, hijacking, or unauthorised use with remote immobilisation — available 24/7 through our control room. Coordinated directly with law enforcement for maximum recovery success.

OFFLINE RESILIENCE

Every DigitFMS system operates fully offline during load shedding — storing data locally, maintaining alerts, as well as synchronising automatically when connectivity is restored. There are zero gaps in protection, regardless of the grid.

A business that protects assets must also protect its community and its environment. At DigitFMS, sustainability is not a separate initiative — it is embedded in how our technology works. Every fleet we optimise runs fewer kilometres. Every fuel theft we prevent eliminates unnecessary journeys. Every smart routing decision reduces emissions. Protection and sustainability are the same thing.

Beyond the technology, we invest directly in the communities where our 100+ branches operate — supporting local employment, skills development, and community safety. We believe a business that makes South Africa safer has a broader obligation: to make South Africa better.

OUR COMMITMENTS

ENVIRONMENTAL IMPACT REDUCED

Fleet optimisation, fuel theft prevention, and route efficiency directly reduce fuel consumed and emissions produced. Less theft means fewer replacement journeys. Smarter routing means fewer kilometres. Measuredability built into deployment.

INVESTING IN COMMUNITIES

Our 100+ branches are locally-owned and locally-staffed, creating employment, building skills, and contributing to the economic fabric of communities across all nine provinces. Local ownership means genuine investment in outcomes beyond the contract.

RESPONSIBLE OPERATIONS

PSiRA-compliant, POPIA-adherent, SAIDSA-certified — DigitFMS operates to the highest legal and ethical standards in South Africa's private security industry. Transparent pricing, honest assessments, technology deployed only with the proper authorisation.

DigitFMS has spent 20 years building the most trusted electronic security network in South Africa – and we are now accelerating into the next phase of growth. The threats our clients face are becoming more sophisticated, and our technology roadmap is built to stay ahead of them, not catch up to them.

CONTINENTAL EXPANSION

Our proven South African model is being deployed across Sub-Saharan Africa – adapting locally, operating to the same standards, as well as bringing electronic security capability to markets where organised asset theft is growing fastest.

NEXT-GEN AI & PREDICTIVE ANALYTICS

The next generation of DigitFMS technology will predict threats before they materialise – using AI to analyse behavioural patterns, flag anomalies, and trigger pre-emptive interventions. Moving from reactive security to predictive asset protection.

DEEPER SYSTEMS INTEGRATION

Full integration between fleet tracking, fuel management, CCTV, alarms, and off-site monitoring – unified into a single client dashboard delivering a complete operational security picture across every asset, site, and vehicle simultaneously.

Our 24/7 Centralised Control Room is the operational nerve centre of DigitFMS — monitoring your assets in real time, escalating threats the moment they are detected, and coordinating response before you are even aware an incident has begun. Integrated data from GPS, CCTV, alarms, and fuel systems feeds a single operational picture, enabling faster decisions and better outcomes.

DigitFMS Finance removes the final barrier — making enterprise-grade electronic security accessible on flexible monthly instalments, with no large upfront capital requirement. From free assessment to fully operational system within five business days. From system handover to long-term partnership.
