DIGIT D-MICRO7

ULTRA-COVERT BACK-UP TRACKING DEVICE

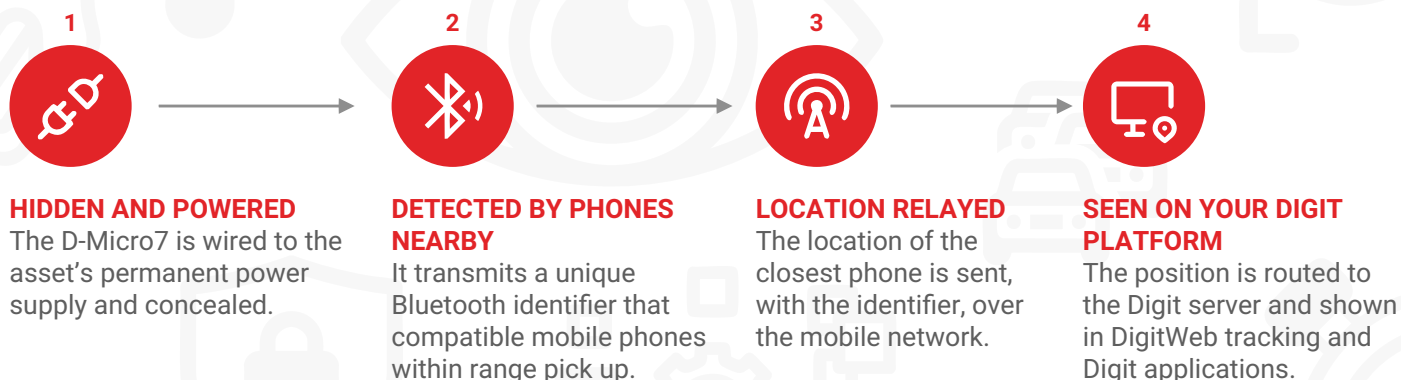

THE WORLD'S SMALLEST TRACKING UNIT WITH TRIP REPORTING

Enlarged.
Actual length 21 mm.

IT FITS ON A R5 COIN AND STILL REPORTS THE TRIP

The **Digit D-Micro7** is a miniature wired tracking device built as a back-up or ultra-covert layer for stolen vehicle and asset recovery. It fits on a R5 coin, runs off the asset's own power and uses Bluetooth and compatible mobile phones nearby to report its location to your Digit platform, building trip reports with no SIM card and a very low running cost.

HOW IT WORKS

KEY FEATURES

- FITS ON A R5 COIN**
At approximately $9.5 \times 21 \times 4$ mm, the D-Micro7 goes where larger trackers cannot, which makes it harder to find and remove.
- TRIP REPORTING**
Builds trip reports with an estimated distance and general route, while keeping signal transmission to a minimum.
- NO SIM CARD**
Location is relayed through compatible mobile phones nearby, so there is no SIM card to buy or manage. Running costs stay low.
- WIDE-VOLTAGE INPUT**
A 5–60 V DC supply range lets one device protect motorbikes, cars, trucks, boats, golf carts and other powered assets.
- MINIMAL POWER DRAW**
Drawing approximately 6 mA at 12 V, the D-Micro7 is designed to stay permanently connected to the asset's own power.
- ONE DIGIT PLATFORM**
Fully compatible with DigitWeb tracking and Digit applications, so the D-Micro7 sits alongside your other Digit devices.

ACTUAL SIZE

WHY ADD A D-MICRO7

- **Fits on a R5 coin**, so it goes where larger trackers cannot.
- **A second layer of recovery** that works alongside your primary tracker.
- **Trip reports** with an estimated distance and general route, on your Digit platform.
- **Protection for lower-value assets** that would not justify a full tracking unit.

DESIGNED FOR:

 Cars and trucks	 Motorbikes	 Boats and watercraft	 Golf carts
 Generators	 Gate motors	 Mobile assets	 Displays, computers and servers

Suitable for assets with a permanent 5–60 V DC power supply.

DigitFMS

DIGIT D-MICRO7

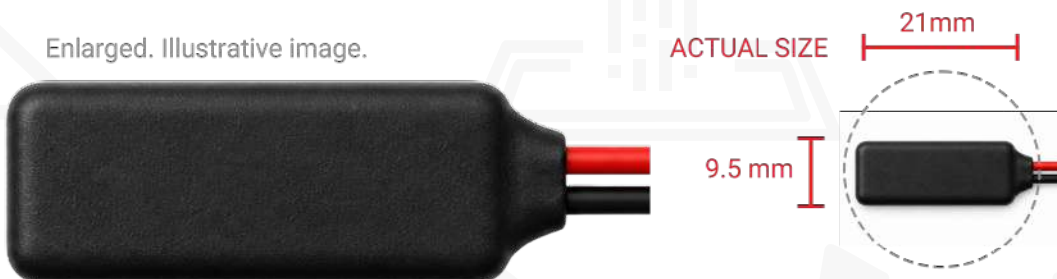

HIDDEN BY DESIGN. READY FOR RECOVERY.

PRODUCT SPECIFICATIONS

Attributes	Parameters
Model	Digit D-Micro7
Device type	Wired Bluetooth tracking device
Trip reporting	Estimated distance travelled and general route
Dimensions	Approx. 9.5 × 21 × 4 mm
Input voltage	5–60 V DC, wide-voltage design
Current draw	Approx. 6 mA at 12 V DC
Power source	Asset's permanent power supply; no internal battery
Connection	Two-wire: power and ground
Reverse-polarity protection	Yes
SIM card	Not required
Antenna	Built-in Bluetooth antenna with PA hardware signal enhancement
Operating temperature	–20 °C to +60 °C
Platform	DigitWeb tracking and Digit applications

PRODUCT DESIGN

DIGIT D-MICRO7

HIDDEN BY DESIGN. READY FOR RECOVERY.

IMPORTANT TO KNOW

WHAT THE D-MICRO7 DOES, AND WHAT IT DOES NOT

HOW DOES THE D-MICRO7 REPORT ITS LOCATION?

The D-Micro7 has no SIM card and does not determine its own position. It transmits a Bluetooth identifier that compatible mobile phones within range detect, and the location of the nearest phone is relayed to the Digit server. Reporting depends on phones being nearby, so update frequency and accuracy will vary.

WHAT DO THE TRIP REPORTS SHOW?

An estimate of the distance travelled and the general route taken, built from locations relayed by compatible phones nearby. Detail varies with how many phones the asset passes.

IS IT A REPLACEMENT FOR MY TRACKING SYSTEM?

No. The D-Micro7 is a back-up or covert layer intended for stolen vehicle and asset recovery. It is not a fleet management device and does not provide continuous real-time tracking.

DOES IT NEED A BATTERY OR A SIM CARD?

Neither. There is no SIM card and no internal battery. The device must be connected to permanent power of 5–60 V DC in the asset, and it will not report if that supply is removed.

WHAT SHOULD I KNOW ABOUT THE SERVICE?

The D-Micro7 relies on third-party networks that DigitFMS does not own or control. Those providers may change or withdraw their service without notice, which could affect or end the device's operation. We tell you this upfront because you should know before you buy.

IS THE D-MICRO7 INSURANCE-APPROVED?

Not at present. The D-Micro7 does not currently carry insurance approval and should not be relied on to meet an insurer's tracking requirement. Ask your DigitFMS branch about approved tracking solutions.
